

13.2 Complements and Unions of Events

1

A sample space is a set.
An event is a set.

The idea of this section is to combine the ideas of sets with probability.

We will use complements, unions, and intersections.

2

Recall:

The complement of a set is the collection of elements not in that set.

$$A' = \{ \text{elements not in } A \}$$

The complement of an event E , is the collection of outcomes not in E .

$$E' = \{ \text{outcomes not in } E \}$$

3

If an outcome is in the sample space, it must be in E or E' .

So E and E' give all outcomes.

$$\text{So } P(E) + P(E') = 1 \quad (100\%)$$

COMPUTING THE PROBABILITY OF THE COMPLEMENT OF AN EVENT If E is an event, then $P(E') = 1 - P(E)$.

A drug was administered.

The probability that the person got better was 0.28. (28%)

What is the probability that the person did not get better?

5

A drug was administered.

The probability that the person got better was 0.28. (28%)

What is the probability that the person did not get better?

$$\begin{aligned} P(E') &= 1 - P(E) \\ &= 1 - 0.28 \\ &= 0.72 \end{aligned}$$

6

A single card is removed from a deck.

What is the probability that it is not the Jack of Clubs?

A single card is removed from a deck.

What is the probability that it is not the Jack of Clubs?

$E = \text{Jack of Clubs}$
 $P(E) = 1/52$

$E' = \text{not Jack of Clubs}$
 $P(E') = 1 - 1/52 = 52/52 - 1/52 = 51/52$

Complements of Events

- Example: The graph shows the party affiliation of a group of voters. If we randomly select a person from this group, what is the probability that the person has a party affiliation?

Percent of voters according to party affiliation

Section 14.2, Slide 9

Complements of Events

- Solution: Let A be the event that the person we select has some party affiliation. It is simpler to calculate the probability of A' . Since 23.7% have no party affiliation,

Section 14.2, Slide 10

Complements of Events

- Solution: Let A be the event that the person we select has some party affiliation. It is simpler to calculate the probability of A' . Since 23.7% have no party affiliation,

$$P(A) = 1 - P(A') = 1 - 0.237 = 0.763.$$

Section 14.2, Slide 11

Word problems:

OR means union
 Heart or Ace
 $\text{Heart} \cup \text{Ace}$

AND means intersection
 Heart and Ace
 $\text{Heart} \cap \text{Ace}$

12

Unions of Events

RULE FOR COMPUTING THE PROBABILITY OF A UNION OF TWO EVENTS

If E and F are events, then

$$P(E \cup F) = P(E) + P(F) - P(E \cap F).$$

If E and F have no outcomes in common, they are called *mutually exclusive events*. In this case, because $E \cap F = \emptyset$, the preceding formula simplifies to

$$P(E \cup F) = P(E) + P(F).$$

Where two events intersect, outcomes contribute twice to the probability of $E \cup F$.

Union of E and F

13

Section 14.2, Slide 12

One card was drawn from a deck.

What is the probability that it was a Heart or an Ace?

14

One card was drawn from a deck.

What is the probability that it was a Heart or an Ace?

$$P(\text{Heart}) = 13/52$$

$$P(\text{Ace}) = 4/52$$

$$P(\text{Heart} \cap \text{Ace}) = 1/52 \quad \text{only "Ace of Hearts"}$$

15

One card was drawn from a deck.

What is the probability that it was a Heart or an Ace?

$$P(\text{Heart}) = 13/52$$

$$P(\text{Ace}) = 4/52$$

$$P(\text{Heart} \cap \text{Ace}) = 1/52$$

$$\begin{aligned} P(\text{Heart} \cup \text{Ace}) &= P(\text{Heart}) + P(\text{Ace}) \\ &\quad - P(\text{Heart} \cap \text{Ace}) \\ &= 16/52 = 4/13 \end{aligned}$$

Unions of Events

- Example: If we select a single card from a standard 52-card deck, what is the probability that we draw either a heart or a face card?
- Solution: Let H be the event "draw a heart" and F be the event "draw a face card." We are looking for $P(H \cup F)$.

(continued on next slide)

Section 14.2, Slide 15

Unions of Events

Where the two events intersect, outcomes contribute twice to the probability of $E \cup F$.

probability of a heart

probability of a face card

$$P(H \cup F) = P(H) + P(F) - P(H \cap F) = \frac{13}{52} + \frac{12}{52} - \frac{3}{52} = \frac{22}{52} = \frac{11}{26}$$

probability of a heart that is a face card

There are 13 hearts, 12 face cards, and 3 cards that are both hearts and face cards.

Section 14.2, Slide 16

If you are given 3 out of the 4 terms in the equation

$$P(E \cup F) = P(E) + P(F) - P(E \cap F)$$

Then you can use algebra to find the remaining term.

This can also be read as

$$P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F)$$

19

The probability a UT student is

- an Education major is 0.09.
- an Ed. major and in athletics is 0.01
- in Ed or athletics is 0.12.

What is the probability that a UT student is in athletics?

20

The probability a UT student is

- an Education major is 0.09.
- an Ed. major and in athletics is 0.01
- in Ed or athletics is 0.12.

What is the probability that a UT student is in athletics?

$$\begin{aligned} P(\text{Ed or ath}) &= P(\text{Ed}) + P(\text{ath}) - P(\text{Ed and ath}) \\ 0.12 &= 0.09 + P(\text{ath}) - 0.01 \\ 0.12 &= 0.08 + P(\text{ath}) \\ 0.04 &= P(\text{ath}) \end{aligned}$$

21

The probability of a person being

- happy is 0.45
- a millionaire is 0.02
- happy or a millionaire is 0.46

What is the probability that a person is happy and a millionaire?

22

The probability of a person being

- happy is 0.45
- a millionaire is 0.02
- happy or a millionaire is 0.46

What is the probability that a person is happy and a millionaire?

$$\begin{aligned} P(\text{happy or $$$}) &= \\ &P(\text{happy}) + P(\text{$$$}) - P(\text{happy and $$$}) \\ 0.46 &= 0.45 + 0.02 - P(\text{H and $$$}) \\ 0.46 &= 0.47 - P(\text{H and $$$}) \\ P(\text{H and $$$}) &= 0.01 \end{aligned}$$

23
