# Solution of non-standard two-point boundary value problems

David Jeffrey and Pratibha

UWO, Canada and Indian Institute of Technology Roorkee, India

djeffrey@uwo.ca and pratifma@iitr.ernet.in

In several areas of physics, 2-point boundary problems are confronted. These require analysis of the solution structure at each end, followed by the determination of numerical starting values at each end so that integration can produce a smooth solution. Specific problems are described and successful solution methods presented.
