Step-By-Step Software-Guided Calculus & Statistics Problem Solving

Explore Hawkes' mastery-based homework & testing software, featuring over 43,000 unique algorithmically generated question iterations and the powerful LaTeX-based Question Builder tool, allowing instructors to create their own questions! Discover how software can provide pinpointing, error-specific feedback, recognize alternative equivalent answers, and teach students through interactive step-by-step problem-solving tutorials with detailed explanations of the solution process. Save time with automated grading and receive detailed analytics on question-based performance, time on task, and assignment completion to track student success and intervene at crucial learning points. Learn about other Calculus and Statistics resources, including short example videos, concept overview videos, and immersive and challenging chapter projects based on real-world applications of course material.
