Time and Location: MWF 10:00-10:50 BO 1045

Recitation: (011)TR 9-9:50 UH3800, (012)TR 10-10:50 FH1140, (013)TR 11-11:50 UH5260 Instructor: Seung-Moon Hong, UH2030M, (419)530-2804, seungmoon.hong@utoledo.edu Office hours: MW 11:00-1:30

Textbook: Thomas' Calculus Early Transcendentals, 12th edition by George B. Thomas, Maurice D. Weir and Joel Hass. The textbook is available online at a 30% discount in electronic form from www.coursesmart.com. In this case, students will be responsible for printing it or accessing it electronically.

Prerequisites: Passing grade in Math 1850 or equivalent.

Resources: There are resources available for students who need extra help outside my office hours. For this course the most reliable source of tutorial help can be found at the Mathematics Learning and Resource Center, B0200, located in the basement of Carlson Library-phone ext. 2176. For MLRC hours, see http://www.utoledo.edu/mlrc/MLRC.pdf.

Homework: It will be assigned and graded on MyMahtLab. Student need an access code. The course ID for this class is hong62432. You are responsible to check if you have new homework and finish it on time. Late homework will not be accepted for any reason. To allow some unexpected cases, a few of the lowest assignment scores will be dropped.

Quizzes: There will be a quiz weekly. Some will be announced and some will not. No late quiz is accepted. At the end of the semester, 1-2 of the lowest quizzes will be dropped.

Exams: There will be two in class exams and a comprehensive final exam given during scheduled final exam period for the section.

Calculator: No calculators with symbolic or graphing capabilities are allowed on quizzes and exams. **Cell Phones and Laptop Computer Usage**: Please turn off your cell phone and keep it stored away. You can use a laptop computer to take notes, but it cannot be used for any other purpose. **Attendance**: Your attendance to all classes is strongly encouraged. Any announcements made in class regarding the schedule of future classes, exams or other information takes precedence over this

outline.

Missed Quizzes and Exams: If you miss a class you are responsible for obtaining the material, notes, etc. Absence for quizzes and exams can only be excused if covered by the University's missed class policy. The policy specifically mentions absences from class may be excused for personal emergencies, religious observances, participation in certain UT sponsored activities, and government required activities. For more information see http://www.utoledo.edu/facsenate/missed_class_policy.html. The student must contact me in advance by phone, e-mail or in person, provide official documentation to back up his or her absence, and arrange to make up the missed item as soon as possible.

Drop/Withdrawal: The last day to drop or add this course is the Friday of the second week of classes. The last day to withdraw from this class with a grade of W is the Friday of the tenth week of classes.

Academic Honesty: Successful completion of this course requires personal integrity and honest academic effort. Any dishonest activities will not be tolerated in this course. Any student who

engages in dishonest behavior will, at the instructor's discretion, fail the exam, fail the course, or more serious consequences. See the University's "Policy Statement on Academic Dishonesty".

Non-Discrimination Policy: The University of Toledo is committed to a policy of equal opportunity in education, affirms the values and goals of diversity.

Students with Disabilities: The University will make reasonable academic accommodations for students with documented disabilities. Students should contact the Office of Accessibility (Rocket Hall 1820; 419.530.4981; officeofaccessibility@utoledo.edu) as soon as possible for more information and/or to initiate the process for accessing academic accommodations. For the full policy see: http://www.utoledo.edu/utlc/accessibility/faculty.html

Learning objectives:

The successful Calculus II students should be able to

1. Use antiderivatives to evaluate definite integrals and apply definite integrals in a variety of applications to model physical, biological or economic situations. Whatever applications (e.g. determining area, volume of solids of revolution, arc-length, area of surfaces of revolution, centroids, work, and fluid forces) are chosen, the emphasis should be on setting up an approximating Riemann sum and representing its limit as a definite integral.

2. Employ a variety of integration techniques to evaluate special types of integrals, including substitution, integration by parts, trigonometric substitution, and partial fraction decomposition.

3. Evaluate improper integrals, including integrals over infinite intervals, as well as integrals in which the integrand becomes infinite on the interval of integration.

4. Determine the existence of and find algebraically the limits of sequences. Determine whether a series converges by using appropriate tests, including the comparison, ratio, root, and integral.

5. Find the n-th Taylor polynomial at a specified center for a function and estimate the error term. Use appropriate techniques to differentiate, integrate and find the radius of convergence for the power series of various functions.

6. Analyze curves given parametrically and in polar form and find the areas of regions defined by such curves.

7. Perform and apply vector operations, including the dot and cross product of vectors, in the plane and space.

Grading: The following percentages are assigned to the components of the student's grade. Homework 10%, Quizzes 20%, Exam I 20%, Exam II 20%, Final Exam 30%.

The final letter grade will be based on your total average as follows:

Total average	60% or above	70% or above	80% or above	90% or above
Grade	D	С	В	А

Calendar:

Last day to add/drop	Aug 31
Exam I	Sep 21
Exam II	Oct 19
Last day to withdraw	Oct 26
Final Exam	Dec 14, 8:00-10:00

${\bf Schedule}:$

Week	Subject	
1	6.1 Volumes using Cross Sections	
	6.2 Volumes using Cylindrical Shells	
2	6.3 Arc Length	
3	8.1 Integration by Parts	
	8.2 Trigonometric Integrals	
4	8.3 Trigonometric Substitution	
	8.4 Integration of Rational Functions by Partial Fractions	
5	8.7 Improper Integrals	
	10.1 Sequences	
	Exam I	
6	10.2 Infinite Series	
	10.3 The Integral Test	
7	10.4 Comparison Tests	
	10.5 Ratio and Root Tests	
	10.6 Absolute and Conditional Convergence	
8	10.7 Power Series	
	10.8 Taylor and Maclaurin Series	
	10.9 Convergence of Taylor Series	
9	10.10 Applications of Taylor Series	
	11.1 Parameterizations of Plane Curves	
	Exam II	
10	11.2 Calculus with Parametric Curves	
	11.3 Polar Coordinates	
11	11.4 Graphing in Polar Coordinates	
	11.5 Areas and Lengths in Polar Coordinates	
12	12.1 Three Dimensional coordinate system	
	12.2 Vectors	
13	12.3 The Dot Product	
	12.4 The Cross Product	
14	12.5 Lines and Planes in Space	
15	12.6 Cylinders and Quadric Surfaces (opt)
